Education

University of Illinois Urbana-Champaign

Champaign, IL

M.S in Information Science

09/2025 – 05/2027

- Relevant Courses: Distributed Systems, Database Systems, Software Engineering, Cloud Computing

Skills

- JavaScript, TypeScript, Java, Python, C++, HTML, CSS; React, Vue, SvelteKit, JSP, Figma; Spring Boot, Node.js, Express, NestJS, FastAPI, RESTful API, WebSocket; MySQL, PostgreSQL, MongoDB, Redis, Kafka, OpenSearch, Debezium; AWS, Docker, CI/CD, Git, Kubernetes, Prometheus, Jest, JUnit

Experience

Kocree, Inc.

Champaign, IL

Full Stack System Architect Intern

05/2026 – present

- Root-caused a multi-environment backend crash loop responsible for over 150,000 Kubernetes pod restarts by tracing cluster logs and isolating distinct configuration faults in the identity layer.
- Architected and documented system specifications for a 15-service polyglot monorepo, mapping complex event-driven data pipelines utilizing PostgreSQL, Debezium CDC, Kafka, and OpenSearch.
- Ensured end-to-end delivery reliability by tracing core user flows across microservices and querying live Zalando-managed production databases to identify and resolve ORM-to-schema drift.

HD Renewables Energy Co., LTD

Taipei, Taiwan

System Architect & Project Manager

08/2024 – 07/2025

- Designed and deployed a real-time big data platform that enabled over 1,000+ Japanese energy market data points per minute to be ingested and visualized, improving decision-making speed for energy traders.
- Applied system optimization techniques such as refactoring, database indexing, Redis caching, and scheduled task processing to limit concurrent thread execution, improving overall system response time by 35% and reducing query latency under peak load.
- Designed rate limiting and load balancing strategies within a cloud-native microservices architecture, leveraging Kubernetes, Prometheus, and API Gateway, which enabled autoscaling and improved throughput by 20% during peak ingestion.
- Led a 15-person Agile development team, increasing sprint delivery rate by 25% within three months through refined planning, daily stand-ups, and retrospectives, ensuring 100% on-time delivery of MVP features.

Full Stack Software Engineer

04/2023 – 08/2024

- Architected RESTful APIs, database schemas, and web interfaces, reducing new data source integration time by 40%.
- Engineered automated web scraping pipelines processing 100,000+ data entries daily, reducing manual collection by 90%.
- Developed dynamic, responsive frontend interfaces using React.js and TypeScript, improving user experience scores by 25%.
- Implemented comprehensive unit and integration testing using Jest for frontend components and JUnit for backend APIs, achieving 90% test coverage across frontend and backend components, reducing bug-related incidents by 40%.

Projects

Eat Together

Taipei, Taiwan

Full-Stack - JavaScript / Vue.js / Firebase

06/2024 – 08/2024

- Collaborated with NGOs and the Taichung City Government to design and implement a solution addressing resource wastage and uneven distribution, ensuring community-aligned support for the homeless population.

Dream Support

Taipei, Taiwan

Full-Stack - JavaScript / Vue.js / Java / PostgreSQL / AWS (EC2)

05/2024 – 11/2024

- Designed and optimized a scalable platform that streamlined complex application processes for social support programs, enabling faster, personalized assistance for 1,000+ active cases across 32 NGOs with high reliability and performance.
- Generated data-driven recommendations through analysis of case histories, empowering social workers to make more informed and effective decisions for client support.
